10042 starting with S/N 0160038368
10054 starting with S/N 0160038740

This feature has been installed on production machines starting with S/N 0160057850.

Subject: SkyTrak Brake Pedal Enhancement Kit Available

INFORMATION ONLY

Based on feedback from our customers regarding brake application resistance, JLG has developed a SkyTrak Brake Pedal enhancement kit which can be installed to increase brake pedal travel. The enhancement helps reduce operator fatigue while performing braking functions frequently seen on the jobsite. The kit consists of all the necessary fittings and hoses to allow the brake valve pressure line to be routed to a different supply source.

Kit P/N 1001167008 is available for 6036 and 6042 telehandler models.

Kit P/N 1001167009 is available for 8042, 10042, and 10054 telehandler models.

Follow Installation Instructions P/N 31212003B to ensure proper kit installation.

No warranty consideration will be allowed for this installation.
